DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed October 5, 2004 have been fully considered but they are not persuasive.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Wells, WO 97/08898 for the same reasons as set forth in the last Office Action.

Response to Remarks

Applicant argues (Amendment, page 8) that the present claimed invention and Wells are fundamentally different in that the claimed invention concerns the manipulation of a compressed transport stream containing a number of packets of data, whereas Wells concerns switching between bitstreams, but the bitstreams are elementary bitstreams, as opposed to transport bitstreams. Applicant also states that a transport stream will typically comprise a plurality of individual, elementary streams contained in a packet structure, and hence argues that the elementary bitstreams in Wells are not packetized. Applicant cites page 18, lines 22-26 of Wells to substantiate this point.

Examiner respectfully disagrees.

Applicant's argument pertaining to elementary streams seems to contradict itself. For example, by stating that a transport stream typically comprises individual, elementary streams contained in a packet structure, but argues that the elementary bitstreams in Wells are not packetized. An elementary bitstream has a conventional meaning well known in the art (e.g. in MPEG coding), and is representative of packetized data. Wells concerns with switching coded bitstreams of MPEG coding or the like. The cited page 18, lines 22-26 of Wells says nothing about the bitstreams are not packetized. In fact, it is the opposite by defining MPEG2 transport streams (i.e. signals) in the context of packetized elementary streams. Thus, applicant's point of argument is not persuasive.

The rest of the arguments (pages 9-10) are based on the premise that Wells does not teach receiving, manipulating and outputting transport streams. This basis has been dispelled above, and Wells indeed discloses receiving, manipulating and outputting transport streams as outlined in details in the last Office Action.

For the reasons above, the grounds of rejection in the last Office Action are maintained.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
